

Enhancing workforce readiness in non-STEM fields

Utilizing Generative AI for teaching and learning

Traditional Workforce Skills

Social Science generally:

- Values critical thinking, research and analysis, professional communication, and problem solving.
- Rarely provides specific, practical examples for employers outside written papers, internships, and industry-partner opportunities.
- Is at risk of being duped by Generative AI (GenAI)'s ability to “say lots, while saying little” – a twofold problem.
- Rarely promotes students' competitive edge for success, outside courses with honors, individual mentorship, and conference poster presentations.

OKSRHE Blueprint 2030

Innovating and Elevating Oklahoma Higher Education for Tomorrow's Workforce

#1. Workforce Readiness

#3. Student Success

**Emphasizing
Student
Confidence
and
Awareness**

Confidence in their
knowledge and
experience in the
discipline

Awareness of their
personal skill mastery
and workforce values

Unique benefit of **teaching skills to use GenAI** paired with **hands-on immersion**

GenAI to **bridge the expertise gap** for intro courses and gen eds

Experience how you can **integrate GenAI** into your courses, using GenAI of course!

Goals for Today's Breakout Session

My Goal for Today

1. Convince you that Generative AI tools are specifically beneficial for enhancing workforce readiness and potential for student success in all non-STEM fields ...

and hopefully in those too.

For the next 30 minutes

I want to transport you to a lab in one of my Intro to International Relations courses so you can experience the benefits of generative AI to bridge the expertise gap in this very room.

Buckle up!

Here's What You Know

This is Practical Lab 1 # of 4 total

The OCCC Academic Integrity Policy

An Introduction to the International Society
research tradition in the field of international
relations.

1. Lab 1 of 4 in a 6-week scenario

- **First day** is traditional course lecture/discussion format
- **Second day** is a hands-on lab using a chapter-tailored Party Rock app to address our scenario

IR Lab Intensive #1 - Day 1	
IR Lab Intensive #1 - Day 2	
Ch 5 (p.137-159)	International Society
IR Lab Practical #1	
Ch 6 (p.170-190)	Classical International Political Economy
IR Lab Practical #2	
Ch 8 (p.220-240)	Post-Positivism
IR Lab Practical #3	
Ch 9 (p.249-274)	Foreign Policy
IR Lab Practical #4	
IR Lab Intensive #2 - Day 1	
IR Lab Intensive #2 - Day 2	

**ORGANIZED
REPORTS AND
ANALYSIS FOR

2. OCCC's Academic Integrity Policy

4.15. Plagiarizing (Plagiarism is generally defined as the use in one's work of specific words, phrases, ideas and/or works without giving proper credit.) Specific examples of plagiarism may include but are not limited to the following:

- 4.15.1. Copying and/or presenting the work of others as one's own work, including sources from the [Internet](#);
- 4.15.2. Copying words, even if sources are cited, unless appropriate quotation is [noted](#);
- 4.15.3. Slightly altering copied words even if the source is cited.

1. Consider how we used GenAI on your STEEP assignment. Identify a policy from 4.15 on plagiarism that may have been a concern for your academic integrity.

2. Explain why you did not need to be concerned about OCCCs Academic Integrity policy when working on the GenAI STEEP assignment .

3. How do your personal ethics of attribution and integrity relate to your answers above? Are they consistent? Different? Something else?

You remember fellow students say

USER EXPERIENCE QUOTES

"This exercise has **helped me be more open to using AI**. I was personally against using it because I was afraid of my work being seen as plagiarism. With this assignment I have learned how to use it and how **helpful it really** is. It helped with understanding at a beginner level."

"**GenAI** explained this **step to me in more common**, simpler terms, such as keywords like **tariffs, rules**, and policies that are different throughout each country around the world.

Applying **STEEP to GenAI**... gave me **more lay terms** and more understandable examples relating to each topic under steep.

When using **GenAI** I felt like **I got a way better explanation**... I was not understanding when I applied the model in class.

The examples I was given were very **straightforward** and easy for me to understand. I personally need an **example** of anything I am learning to fully understand it, so this helped me a lot because I was very confused in my original attempt.

ChatGPT helps me... **because it isn't using words** that I don't understand.

It made **the topic** feel less like a **broad theory**, and at least more like a tool for understanding specific problems in technology or the environment.

help find the best way I could open my eyes and showed me a part of the deconstruction of our realities that I had never considered before

3. Intro International Society Approach

Derived from **philosophy, history, law,**
and **professional/state practice...**

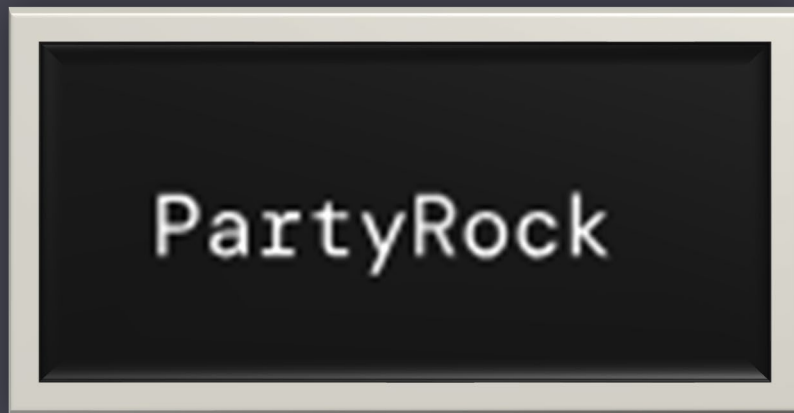

International Society emphasizes

- Outcomes through exercising judgement - Bull (1969)
- “*raison de système*” - Watson (1992)
- IR in a “formally anarchical, but substantively ordered social environment” - Linklater & Suganami (2006, p.47)

Lab #1 Party Rock App

Today you'll:

- Use Party Rock, a custom-built application using GenAI chatbots, together as a class, led by Professor Kelly
- Learn how to copy a Party Rock app to alter and customize yourself
- Overcome some limitations of GenAI memory and replication
- Experience the benefits of prompt crafting and role-definition in AI
- Play through the remainder of the app individually, with troubleshooting access to your instructor

Alien Encounter!: A Global Society Response Simulation

Party Rock Workforce Skills

Today you specifically:

- Applied critical thinking and problem solving through **prompt crafting and role-defining** examples
- Enhanced your ability to tackle complex tasks **independently**
- Demonstrated **ingenuity** by applying reputable sources to abstract problems
- Considered how to **plan** research **skeptically**, increasing validity

Says to an employer:

- You can put critical thinking to use in ways they can observe and measure; they see what you say
- They can trust you to solve problems on your own first; they don't have to be a helicopter boss
- No challenge will be truly novel to you; there's nothing you can't apply expertise to
- You are reliable because you have strategies that manage bias

Advanced GenAI literacy:
experienced benefits of strategic
prompting and role-defining

Party Rock to bridge expertise gap
– to meet students where they're
at, and point them towards
authority

Workforce awareness for success:
Academic/personal skills and
workforce value

**What we
accomplished**

The remaining labs utilize GenAI

- As an interface to retrieve global market analytics and critique sources/metrics
- As a discourse analysis assistant comparing intercoder reliability
- As a foreign policy analysis simulator and “red team” challenger

How can
you do
this
yourself?

Copy this exact app, or
any other, using the
“Remix” function of
Party Rock

Create your very own
Party Rock App from
scratch in less than 3
minutes

Please consider giving positive and negative feedback!
